# Micro Computer

<https://yanivelasco.com/kea/1st/t1/m1/microcomputer/home.html>

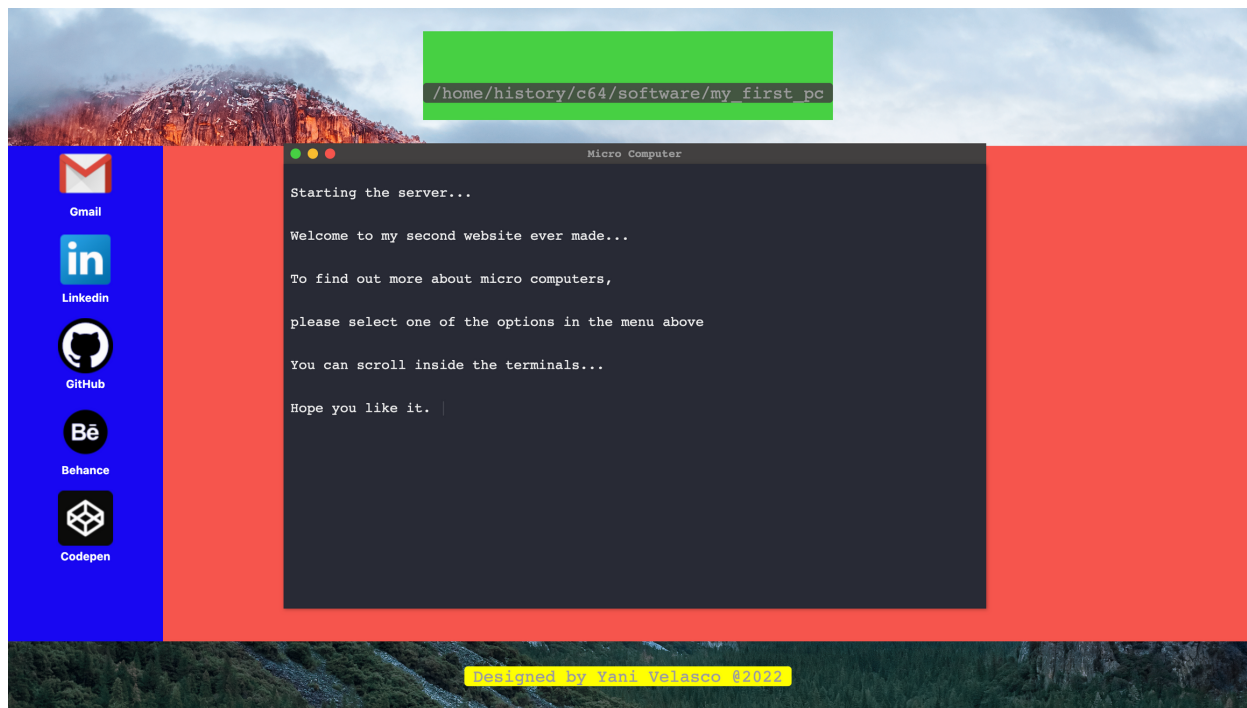

## Concept

Since the main theme was microcomputers, I decided to create each page according to its respective terminal, with some simple typing animations. I tried to make something that reminded the user of the time when these layouts were used.

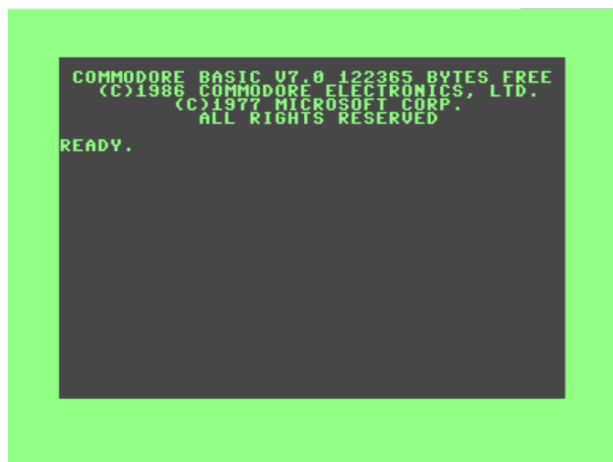

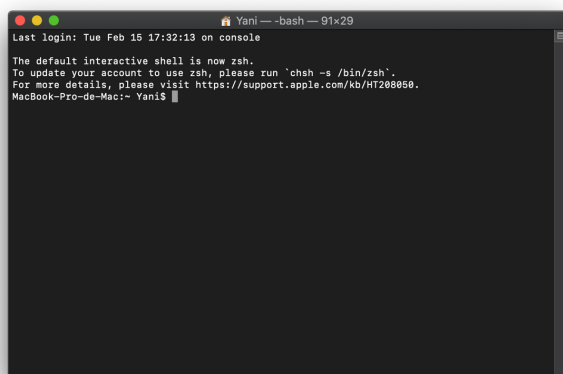

Decide to focus more on editing the page itself than the text, since we had already done the previous task. I didn't put many images either because they are old terminals and I didn't want to use JavaScript.

I tried to create some kind of evolution as it goes through the pages but at the same time the size similarity of all the terminals.

The grid I chose was very simple and repetitive. Just the main menu, the terminal as the principal information, aside with links to my social networks and a basic footer.

Demo of the grid that I used

Some terminals I used for inspiration

# Monday

On Monday we started to learn about CSS grid, and how we can create a composition for the website layout. And also how to create a design thinking with wireframes, we made some sketches and try to create a little bit on Adobe XD

# Wednesday

A practical day where I organize everything that I learn and try to discover and explore more things related to Design and Technology.

# Friday

Last day and time to take out the last questions. With grateful help from the teachers. Now it's time to code and try to put everything together.

# Tuesday

More an easy day, only learn how to validate our website and how to put the aside and articles.

# Thursday

Just a recap day with a focus on the main menu with nav tabs. And more work building our website. Great opportunity to develop with others classmates.

```
# style.css > body
